

Analytical limitations on age uncertainty

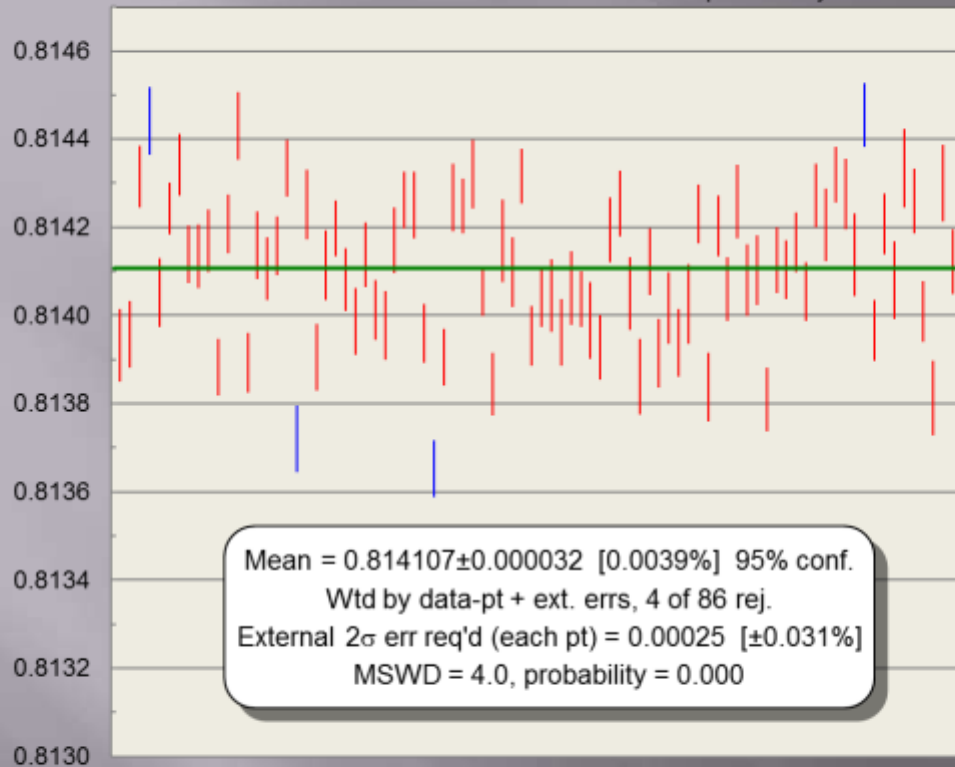

- solution U/Pb & LA Pb-Pb

Matt Horstwood, Nick Roberts &
Pieter Vermeesch

- ▣ San Francisco – “Create & distribute U-Th-Pb solution to determine ICPMS bottom line for simple Pb/U. These analyses will help evaluate the best possible precision of Pb/U ratios by ICPMS where no interferences are present.”
- ▣ Stern & Amelin 2002 – determined over-dispersion in Pb/Pb and Pb/U for SHRIMP using NIST glass and reference zircons
- ▣ This is an on-going study.....

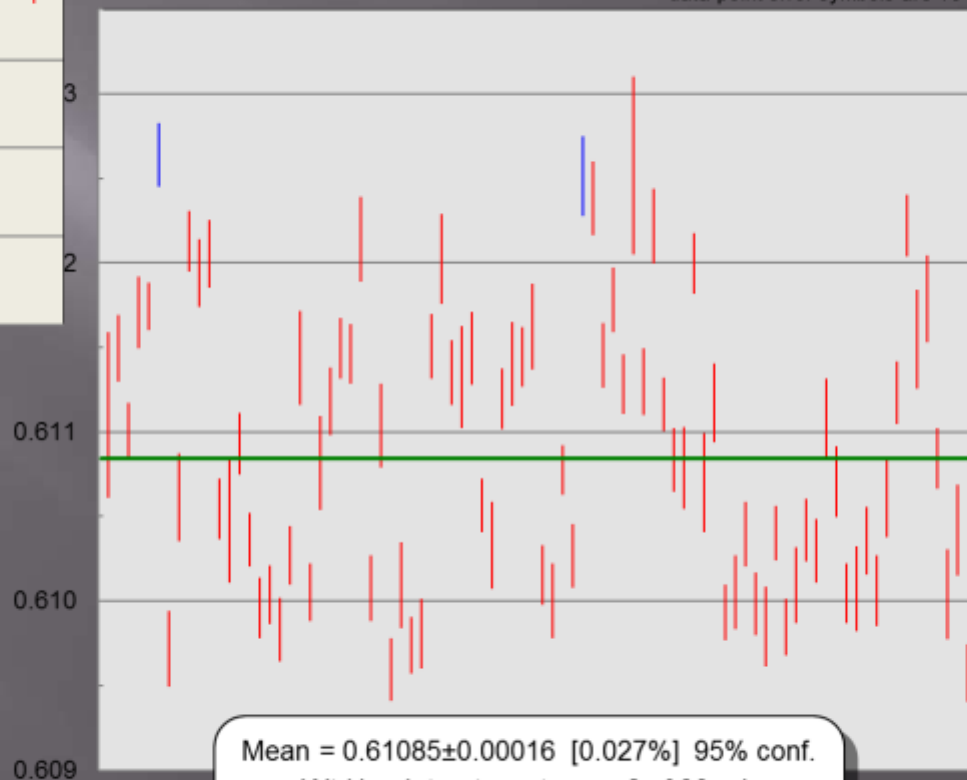

NBS981 207Pb/206Pb meas multi-ion counting

data-point error symbols are 1 σ

205TI/235U meas on Faradays

data-point error symbols are 1 σ

Mean = 0.61085 ± 0.00016 [0.027%] 95% conf.
Wtd by data-pt + ext. errs, 2 of 86 rej.
External 2 σ err req'd (each pt) = 0.0015 [$\pm 0.24\%$]
MSWD = 15, probability = 0.000

207/206 (n=86)

Central value = 0.814106 ± 0.000018 (1σ)

Dispersion = 0.018 %

205/235 (n=86)

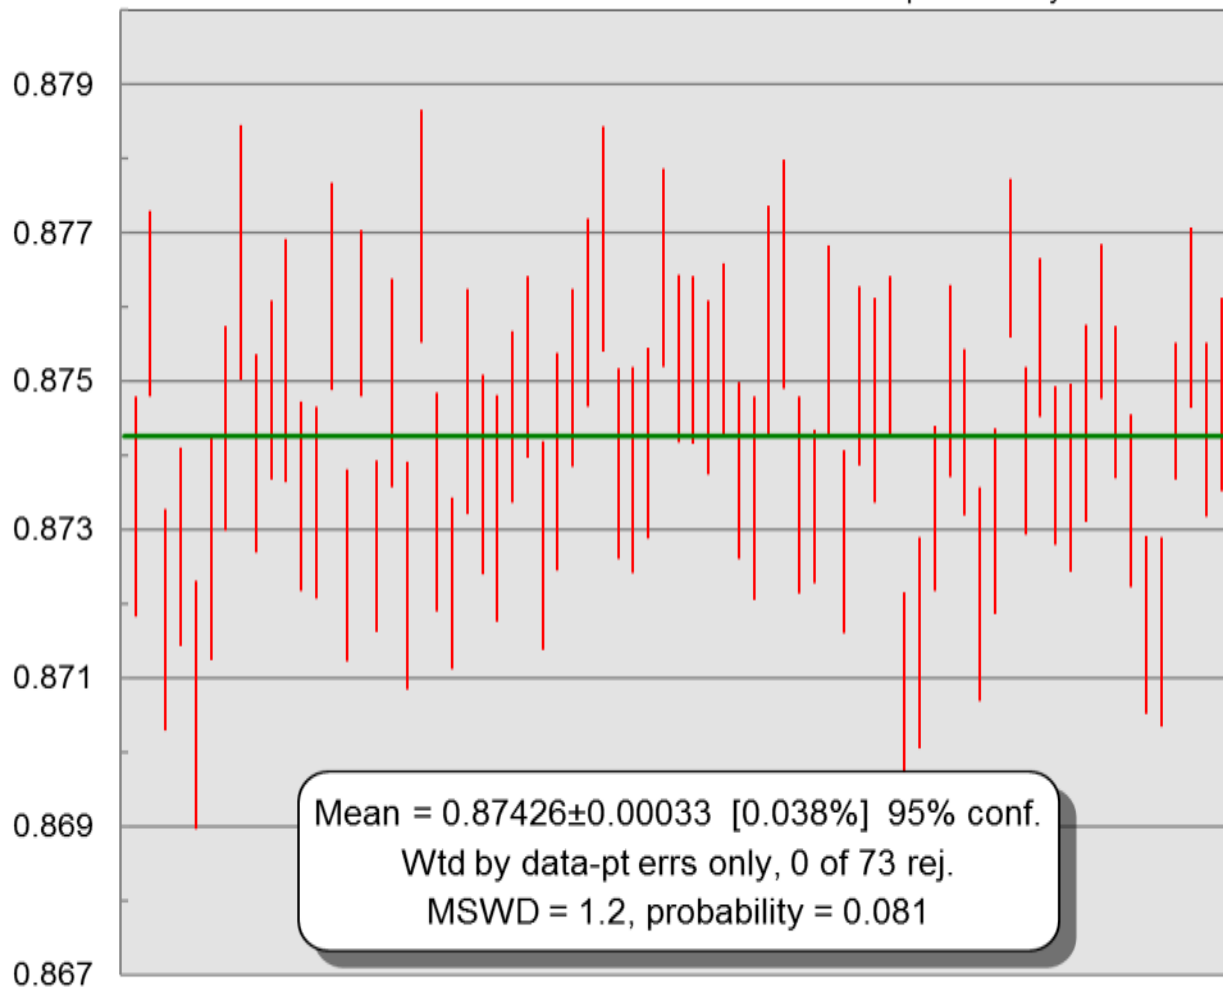

Central value = 0.610886 ± 0.000086 (1σ)

Dispersion = 0.13 %

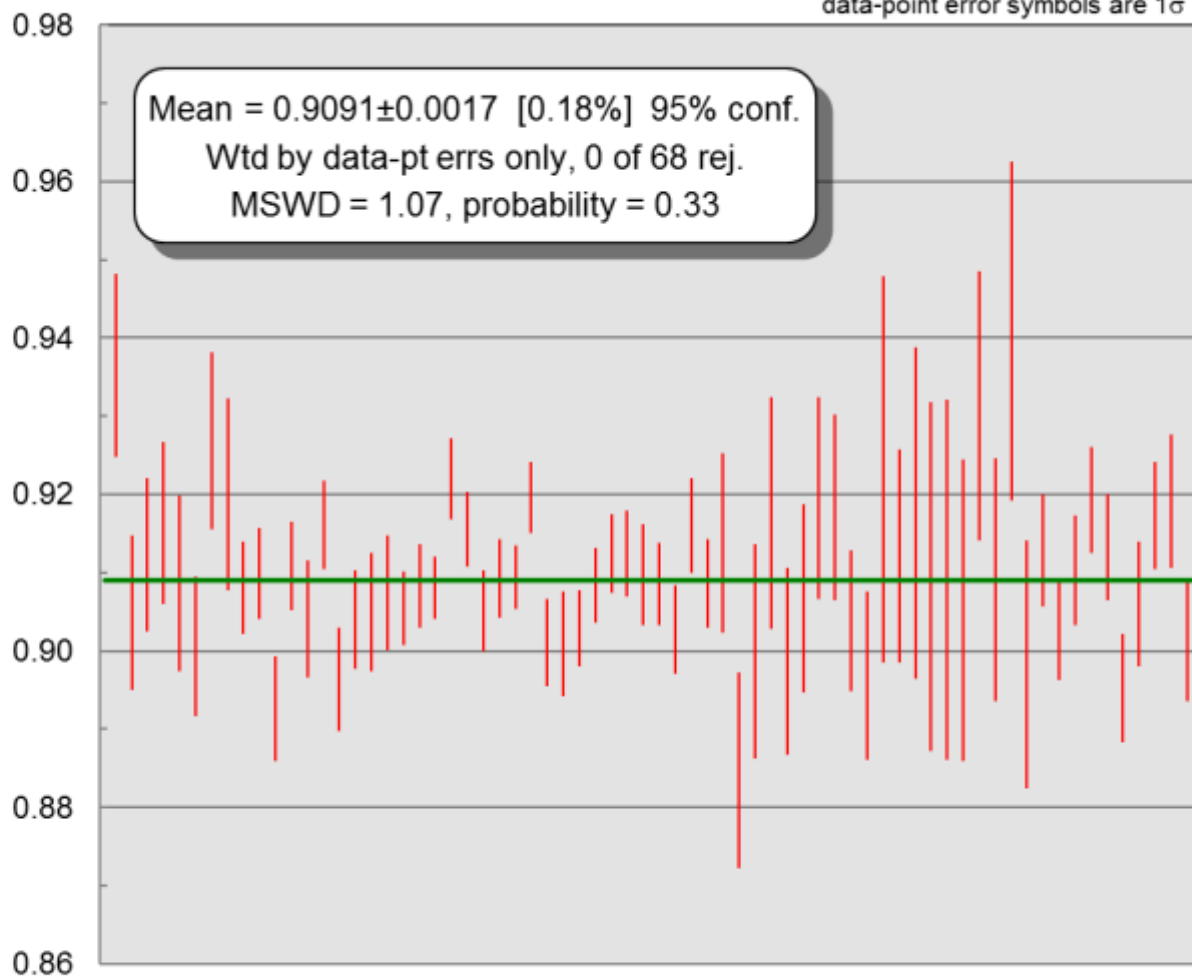

NIST 614 (optimal dwell times)

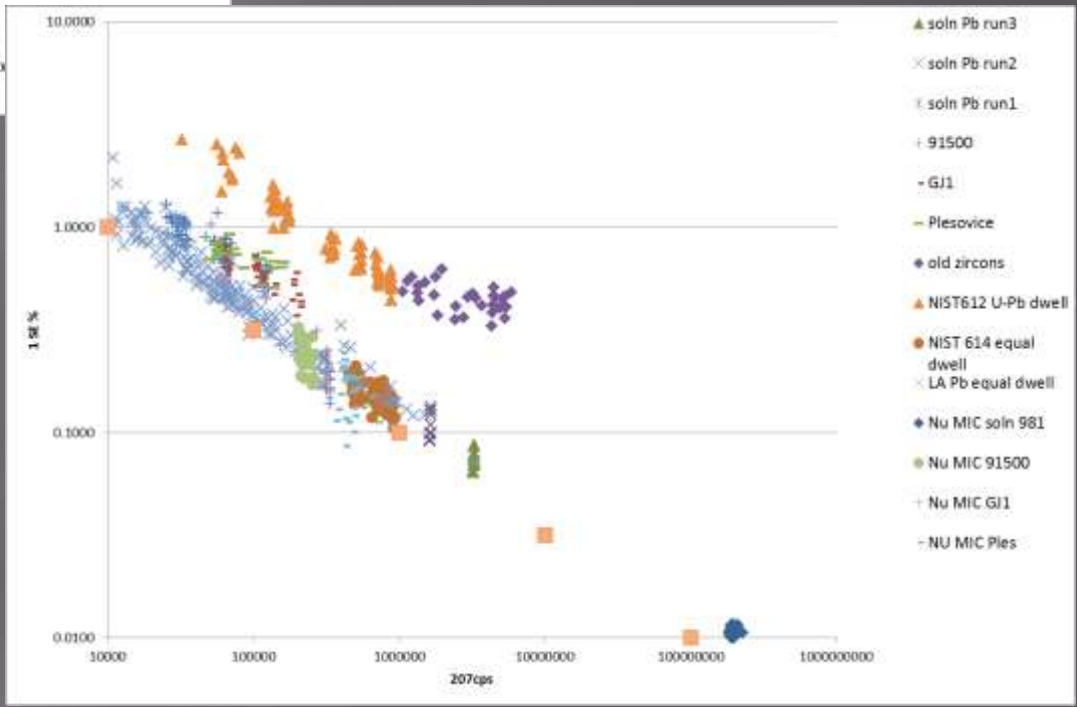

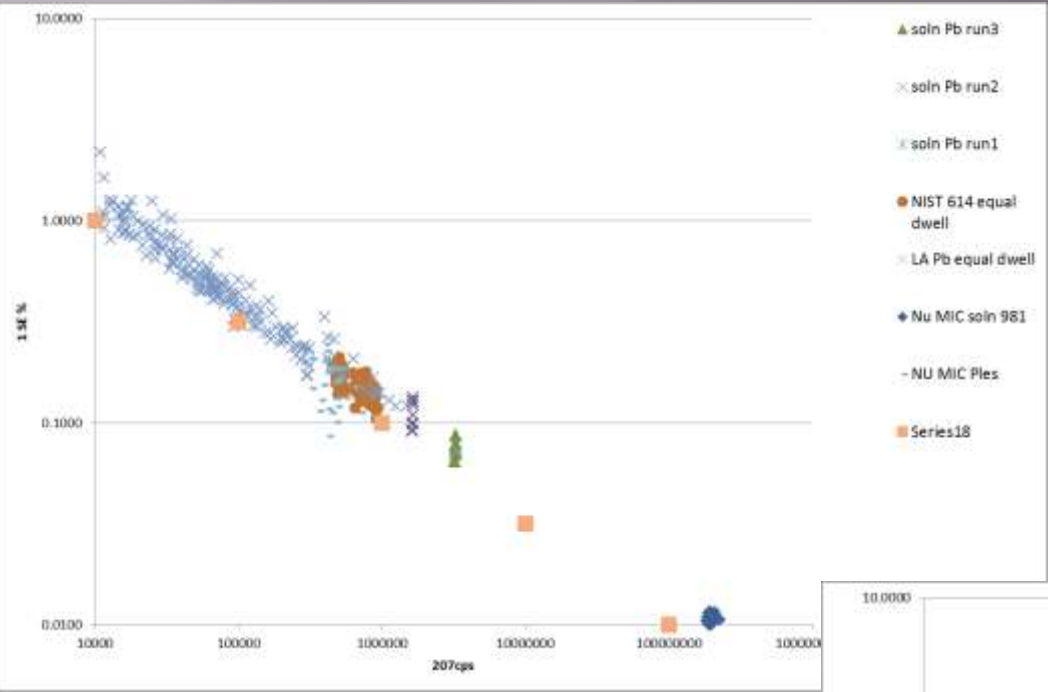

data-point error symbols are 1σ

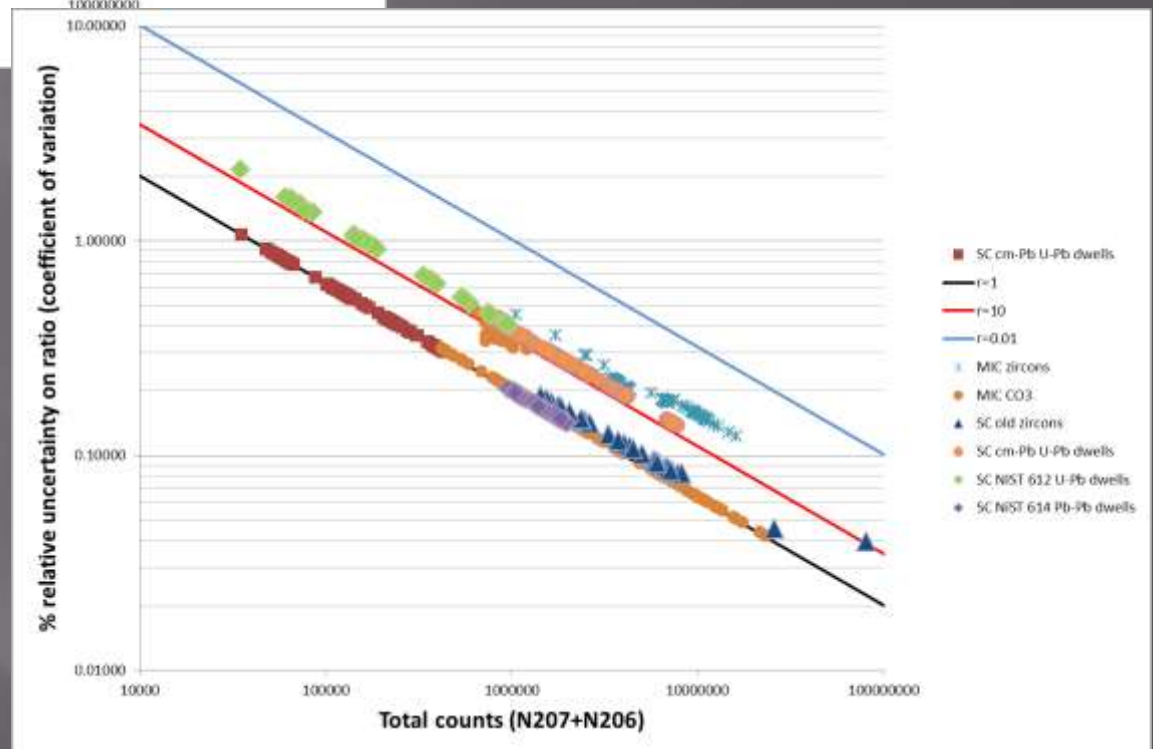

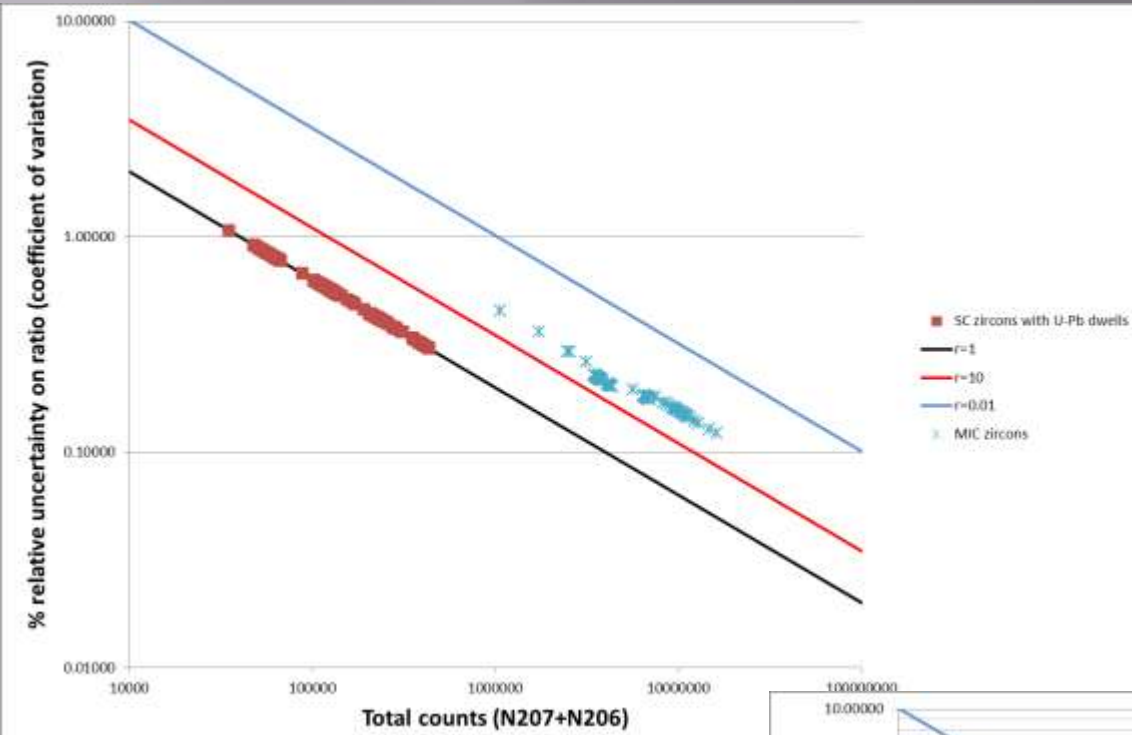

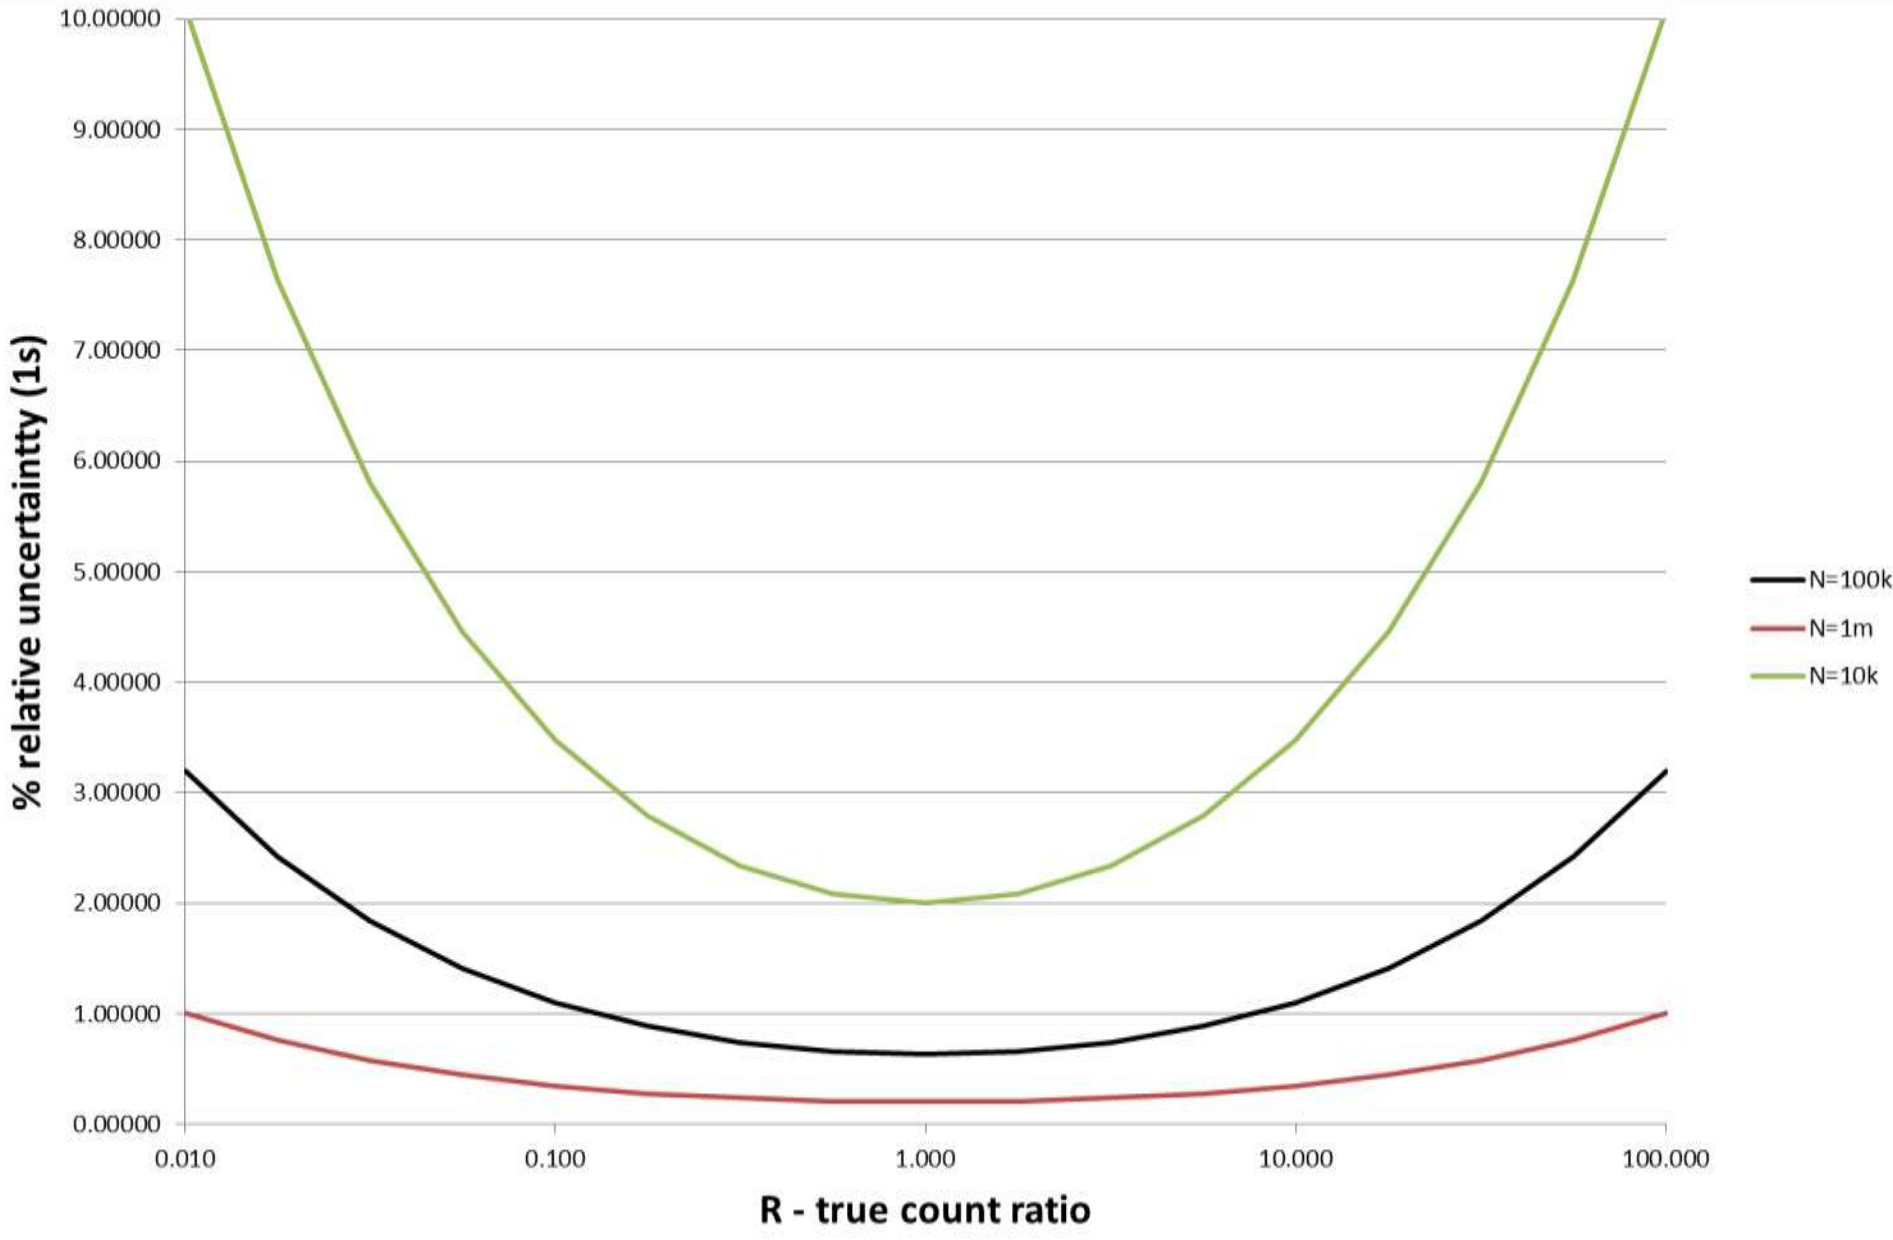

NIST 612 (U-Pb dwell times)

data-point error symbols are 1σ

Conclusions

- Dwell times need optimising to obtain ultimate precision
- Optimum dwell time is equivalent to a true count ratio of 1:1
- Optimum dwell times change with ratio of sample
- Best solution would be to change dwell times 'on-the-fly' – manufacturer request?
- MC inherently not optimised for true count ratio of 1 but improved counting stats more beneficial
- Precision for SC measurements could be improved by factor of 2-10 if dwell times were optimised
- 310ppm overdispersion of Pb/Pb MC data
- 0.25% overdispersion of U/Pb data on a bad day
- No apparent overdispersion after analysing NIST 614 by SC with optimised dwell times or NIST 612 with U-Pb dwell times (at 150kcps 206). This suggests no overdispersion at this level of uncertainty .
- Overdispersion of Pb/Pb and U-Pb data represents limit to which uncertainty can be reduced for this session (additional uncertainty component?). Consistent reproduction of this will allow characterisation of instrument/set-up
